SmartSwitch[™] PC

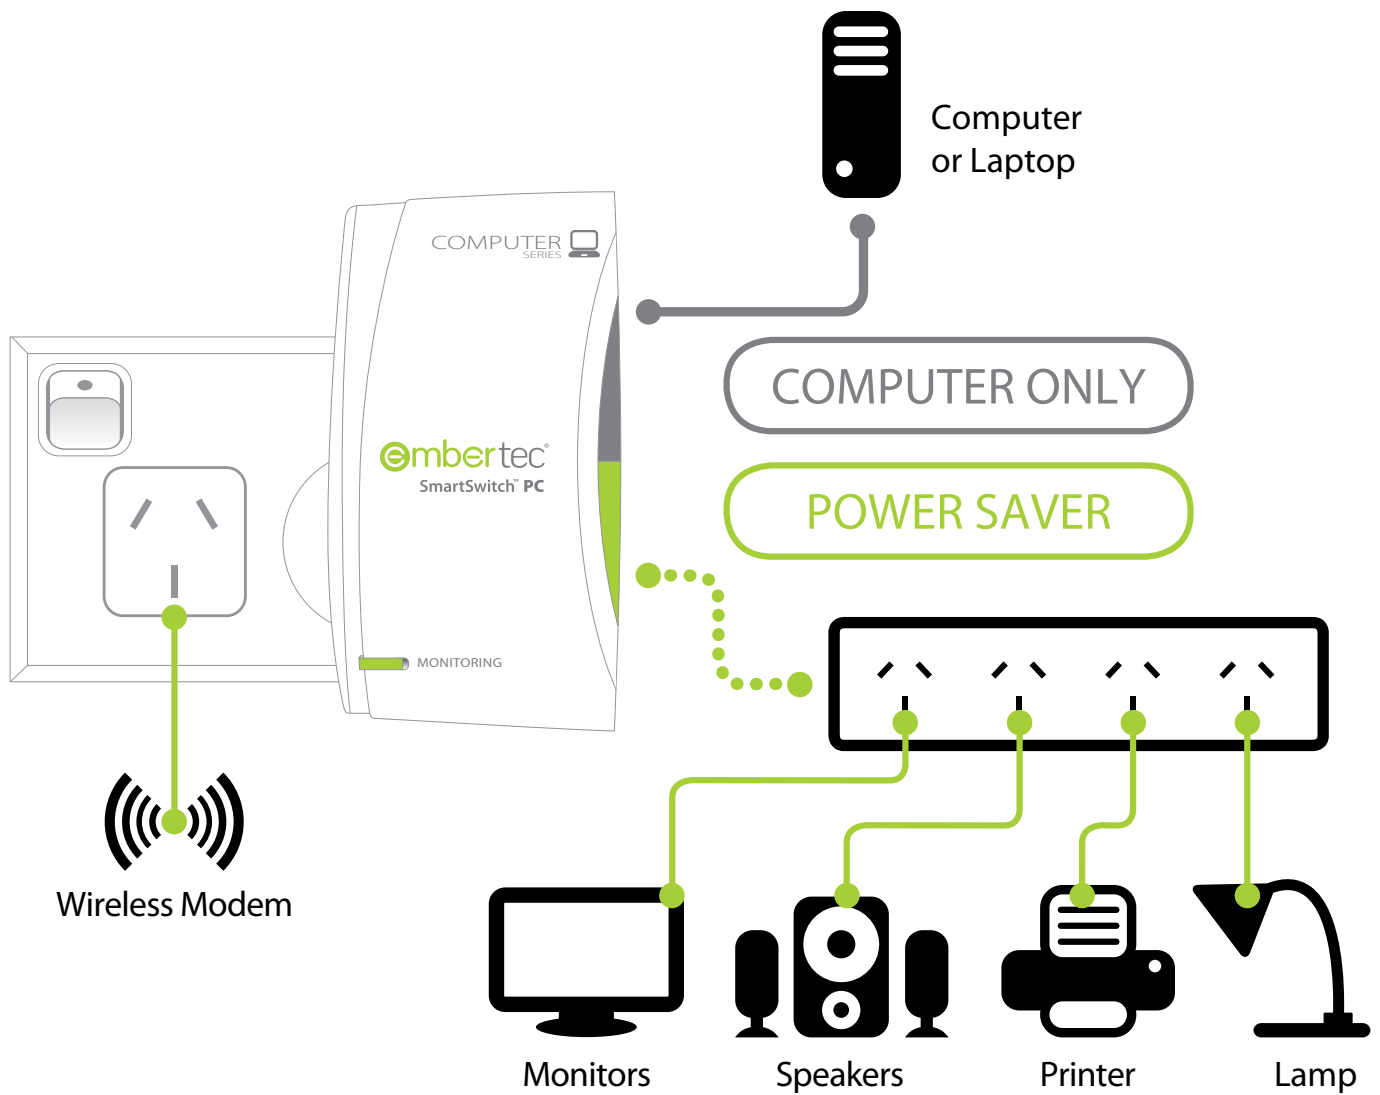

Quick Installation Guide Embertec SmartSwitch[™]

1. Switch off your computer and all peripheral appliances.
2. Switch off the power at the wall socket.
3. Unplug your appliances from the wall socket.
4. Connect only ONE computer (laptop or desktop) into the socket marked 'Computer Only'.
5. Plug a powerboard (powerboard not supplied) into the 'Power Saver' socket.
6. Plug the equipment that is used with the computer such as monitors, printers, speakers and lamps into this powerboard.
7. Connect the equipment that needs to remain turned on, such as the internet modem / router, fax machine and external hard drives to another free socket on the wall outlet.
8. Plug the Embertec SmartSwitch[™] PC into a 230V or 240V power point, and turn the power point on at the wall. (This is the standard power in all Australian households).
9. Now turn on your equipment as normal.

NOTE: Maximise your energy saving by ensuring your computer's power management settings are active so the computer enters sleep or standby after a short period of time (15 minutes). Normally this function is found in a menu called 'Power Options' in a PC; and 'Energy Saver' in a Mac.
